No Ply or Board used

Frequently Asked Questions for Grace Modular Lifelong Kitchens

1. What are Modular Kitchens?

Modular Kitchens are made up of standard sizes of stand alone boxes complete with carcass, shutters, baskets and handles, etc. and can be selected as per requirement and space available. One can also add on later as per needs in future.

2. How is it fire proof?

The boxes are made of thermosetting, fibre reinforced, resin bonded composite sheet with support of epoxy coated steel. All these are fire resistant and fire inert.

3. Is it termite proof, borer proof, warping proof?

Yes. Yes. Yes.

4. Is it water resistant or water proof?

It is totally inert to water, moisture, so it is water proof.

5. Is it long lasting?

All the items are built to last. Most of the structural items are ageless.

6. Can I shift it when I change houses?

Since it is assembled with standard modules, you can easily shift it to any new place.

7. Are the modules of standard sizes?

Modules are of standard sizes which can be selected as per the design and size of space available. We also make tailor made modules for any type of shape and size.

8. Can I expand my kitchen on a later date?

Yes, as the modules are of standard sizes and designs, they would be available in future too.

9. If my walls give moisture, would it affect the kitchen?

Absolutely not, as the sheet in contact with the walls is made of special non-wood material which is inert to water.

10. Can these modules support the granite slab?

Yes, they are very strong as the structure is made of steel.

11. If I have slab precast can I fit these modules?

Yes, these can be easily fitted anywhere.

12. Can I have moving boxes?

Yes, the boxes can be on wheels and can come out from under the slab if so desired.

13. Do I need special labour to fit the kitchen?

No, our factory trained staff will fit it at your place free of cost.

14. How good are the stainless steel accessories?

They are very bright and dimensionally stable.

15. How good are the telescopic channels?

They are all branded and of good quality.

16. What should be the ideal height of the counter slab?

To save yourself from backaches, ideally the slab height should be 32" to 36". Below 32" should be a BIG No.

17. How are the modules supported on the floor?

They are on adjustable stainless steel legs. The point of contact on the floor is nylon lined for scratch free installation.

18. What is the life of the kitchen and how much does the company guarantee?

Yes, these are warranted for one year. However kitchens are long lasting as there is hardly anything to go wrong.

19. What is a PU coated shutter?

The shutters when made in wood are PU coated which makes the wooden shutters non absorbent to moisture. There will be no warping. It also makes the surface scratch free and stain free. This is the best coating that can be done on wood. So this is a far superior coating than melamine coating.

20. How much time would you take to make our kitchen?

Normally it takes 30 days from the date of placing confirmed order with advance payment. The site should be ready before we start production.
