

# LUXURY Bathroom Solutions

### BRASS

All ranges of Luxury Bathroom products are characterized by the use of finest quality raw materials. The brass metal used for casting, forging & mechanical operations contains a very low percentage (<2%) of lead in compliance with the levels fixed by present International Norms applied to drinking water.

### FLEXIBLE HOSES

The flexible hoses used in the full range of Luxury Bathroom products are in conformity with the national & international norms.

### CHROME PLATING

The quality of the coating on surfaces is very important to guarantee the working life of the product in order to obtain a perfect result. All galvanic processes are completely carried out inside the factory, using modern technologies being continuously updated. The depuration plant is connected to the manufacturing machinery and uses "zero waste" methods thus reducing the environmental impact.

### PAINTING

The painting treatments are carried out using epoxidic and atoxic powders giving the products an excellent endurance against scratches, humidity, aggressive environmental conditions and UV rays.

### PACKAGING

The packaging is carefully prepared to prevent damages during transportation, protect the product & guarantee the integrity & the aesthetic quality up to the stage of installation. Normally packaging includes very resistant three folded carton boxes & the product is internally protected by sponges.

## BUILT-IN PRODUCTS

All built in-systems of the Luxury Bathroom Solution product range have double protection : a part is made of polistirene & protects the tap from the wall in order to avoid the condensate from seeping into the wall & causing damp patches or the detachment of the coating

## INOX

The most exclusive taps from the Luxury Bathroom collection are produced with materials of higher quality than those used for the brass products

## CERAMIC CARTRIDGES

The ceramic cartridges used in Luxury Bathroom products meet the requirements of the most important international standards such as EN, NF, ASME, ASSE, CSTB, AS/NZS 3718 & the parts in contact with water are approved by DVGW, WRC, NSF, KIWA et ACS. The 35 & 40 O cartridges are equipped with double control device of flow rates & tempertaure, enabling the consumer to adjust flow & temperature parameters according to his needs in order to save energy and resources

## WARRANTY

Hafele offers a 10 year warranty\* on Luxury Bathroom products against faulty workmanship and manufacturing defect from the date of invoice

## CERTIFIED QUALITY

Inspired by the SoHo neighbourhood in New York which is home to industrial loft apartments, Häfele's JEE-O Soho series comprises of handcrafted shower and bathroom fittings and accessories testifying European manufacturing quality. The unique design, sturdy Stainless Steel material and rich hammer coated black matt finish of the fittings in the Soho series portray an industrial and robust design for a simple and stark bathroom appearance. It is an extensive range providing you all essential bathroom products from essential fittings like spouts and mixers to accessories like soap and towel holders.

**SOHO**

Ever-lasting durability, ultimate sophistication and incomparable European manufacturing quality define the new Bath Concepts by Häfele. These fittings create an ambience of refined functionality in your bathrooms with their products, providing tranquility, peace and space for your body and mind. Although different in design and structure, the two JEE-O series of bathroom fittings by Häfele, Soho and Slimline, at their heart, follow the principle of product longevity and functional luxury. The products in the series are made of Stainless Steel Grade 304, and as a result are extremely sturdy and long lasting. Compared to similar products in the market which use Brass for internal parts, the concealed parts of JEE-O bathroom fittings by Häfele are also made of Stainless Steel 304 which makes it a lead free and eco-friendly solution. This prevents hazardous health and environmental effects and reduces long term maintenance costs.

Häfele's JEE-O Soho series is characterized with a dark, all-weather hammer coating which grants your bathroom the right industrial look and emphasizes on maximal minimalism. Bathtubs and basins in this range are made from DADOquartz, a light weight, sturdy and scratch resistant material, to preserve their beauty for years to come. The fittings from Häfele's JEE-O Slimline series, slim in form and style, are designed as contemporary art pieces to suit modern bathroom spaces.
