

# HÄFELE CONCEALED CISTERNS

For the first time ever, Hafele introduces a unique solution for WC units in the form of concealed water cistern that not only provides international functionality but also enables flexible and space-saving design possibilities within contemporary bathrooms. The entire cistern is ably concealed behind one of the lavatory walls with only a Flush (or actuator) plate visible on the front – thus keeping the modern and elegant look of a bathroom intact. The available space above the WC unit can be used to create artistic wall renditions that complement the overall design of the bathroom.

## PNEUMATIC CONCEALED CISTERNS

Pneumatic Concealed Cistern  
Article No : 588.73.911

### Features:
